

Date: 2022-02-08

Dear Mr Virginijus Sinkevičius, Commissioner for Environment, European Commission

We are writing to urge the EU to support the draft resolution to establish an intergovernmental **“Science-Policy Panel to support action on chemicals, waste and pollution.”** This draft resolution will be brought forward at the upcoming meeting of the United Nations Environment Assembly (UNEA5.2) from February 28 to March 2, 2022, in Nairobi, Kenya.

As scientists working on chemical pollution, we are very concerned with the global threat that poorly managed chemicals and waste pose to human and ecological health. Despite several international agreements, such as the Basel, Rotterdam, Stockholm and Minamata Conventions, there are significant gaps in the international regulation of chemicals, such as lead and other hazardous metals, highly hazardous pesticides, or plastic additives, many of which are endocrine-disrupting. This is especially concerning given that the global production of chemicals and waste continues to increase.

As exemplified by UNEP’s working priorities in 2022–25, the international community is dedicated to jointly tackling the triple interconnected global environmental threats of climate change, loss of biodiversity, and chemicals, waste and pollution. A series of background reports prepared by UNEP in response to the UNEA4 resolutions have made a strong case for the need for sound, credible and authoritative scientific assessments to support timely and effective policy responses to mitigate risks posed by chemicals, waste and pollution at the global, regional and national scales. Such assessments need to come from knowledgeable, independent, and representative experts working through an open and transparent process.

The establishment of an intergovernmental science-policy panel is in line with the EU’s priorities of the Chemicals Strategy for Sustainability, in particular, the sections on *“International leadership”* and *“Cooperation with third countries”*. Therefore, we find it critical that the EU promotes the support for this resolution that aims to strengthen global governance of environmental threats toward a sustainable future.

We represent the IPCP (www.ipcp.ch/), a global network of academic researchers. The IPCP has gathered support for a global intergovernmental science-policy panel and currently, over 2050 scientists and practitioners from over 90 countries have signed our campaign. These signatures are attached to this letter, and they will be delivered to the UNEA5.2 meeting. In addition, letters have been sent to governments worldwide to ask decision-makers to support the resolution. Countries in the EU that have expressed support for the draft resolution include, for example, Austria, Belgium, Denmark, Germany, the Netherlands, and Sweden.

In closing, an intergovernmental science-policy body is much needed to address the threats posed by chemicals, waste and pollution, and to find and promote measures to jointly address this threat along with climate change and loss of biodiversity. The **EU has been the global driver of sustainable management of chemicals for a long time and, as such, the support from the EU is critical for the establishment of an intergovernmental science-policy panel.**

If needed, we are happy to discuss this matter further.

Sincerely,

The IPCP board

Professor Martin Scheringer, RECETOX, Masaryk University, Czech Republic, and Swiss Federal Institute of Technology, Zürich, Switzerland

Assistant Professor Marlene Ågerstrand, Stockholm University, Sweden
